

ABSTRACT

A solid herbicidal formulation of N-(phosphonomethyl)glycine is described, in powder, granule, or flake form, soluble or dispersible in water, is described, containing
5 Glyphosate (N-(phosphonomethyl)glycine) in the form of hydrosoluble salt and also including 5% to 30% in weight of one or more tensioactive agents, soluble in water, compatible with glyphosate and which are solid at ambient temperature, i.e. at approximately 25 °C. The process for preparation of said herbicidal formulation is also described.
